

pH Correction Filter Prices 2022

Low pH or acidic water can cause corrosion of copper pipe fittings. In extreme cases the copper the water dissolves from pipework can react with soaps causing water to turn blue and giving hair dyes unpredictable results, e.g. blondes go green.

The CleanStream® pH correction filters use a slow acting media in the filter which corrects the acidic nature of water without the need for mixing or dosing of chemicals. The media is usually topped up once a year.

Below you can find a table of our 2022 standard offerings, bespoke options are also available on request. We also cater for specialist requirements, please call us on 0845 209 2837 if you have any questions. Please also visit our website at www.cleanstream.co.uk for a full overview of our services.
